                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence was used to design primers and probes which are used in the course of the invention. The specification describes the use of probes and/or amplification primers which are specific, ubiquitous and sensitive for determining the presence and amount of nucleic acids from a bacterial antibiotic resistance gene and specific bacterial and fungal species in any sample suspected of containing the bacterial and fungal nucleic acids, where each of the nucleic acid or variant or part comprises a selected target region hybridisable with the probes or primers. The method of use comprises contacting the sample with the probes or primers and detecting the presence of hybridised probes or amplified products as an indication of the presence of the specific bacterial or fungal species and bacterial antibiotic resistance genes. The methods and products can be used to detect and identify the bacterial antibiotics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

Clone #7A is a PCR product obtained from amplification of nucleic acids from serum samples of a Gulf War veteran (subject #1), diagnosed with Gulf War syndrome, using primers PGO2 and PGO3 (see V18154-55) that are based on poliovirus 5'-nontranslated and P2 regions. #7A is longer than the expected PCR product and shows no sequence identity to any known sequence (see also W18164-74). The invention provides hybridisation assays for the detection of target human nucleic acids in a biological sample. The methods are particularly useful for the early diagnosis of chronic illnesses such as cancer, multiple myeloma, autoimmune diseases, and neurodegenerative diseases (all claimed). The invention is also directed to the detection of non-poliovirus nucleic acids (e.g. directed to the detection of non-poliovirus nucleic acids (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             07-DEC-1998 (first entry)

                                                                                                                         DNA encoding pancreas derived serpin - useful in diagnosis and treatment of pancreatic inflammation and disease Claim 2; Page 24; 36pp; English.

A cDNA clone (T42978), deisgnated Incyte 222689, codes for human pancreas-derived serpin (PDS) (W06202), a novel serine protease inhibitor. It was identified in a human pancreas library via phagemid cDNA clone isolation, sequencing and homology searching against a DNA sequence database. The cDNA can be used in the prodn. of recombinant PDS in host cells, and to design probes or primers useful in diagnostic tests for conditions associated with pancreatic inflammation. Antisense sequences can be used to treat pancreatic inflammation or disease.

CLASSIFICATION DATA:
APPLICATION NUMBER: US 08/228,935

FILING DATE: 14-APR-1994
INFORMATION FOR SEQ ID NO: 35:
SEQUENCE CHARACTERISTICS:
LENGTH: 9 base pairs
TYPE: nucleic acid
STRANDEDNESS: single
TOPOLOGY: linear
MOLECULE TYPE: other nucleic acid
DESCRIPTION: SYNTHETIC DNA"
SEQUENCE 9 BP; 3 A; 2 C; 1 G; 3 T; 0 OTHER.

Patent No. 5464945
GENERAL INFORMATION:
APPLICANT: Reynolds, Rebecca L.
APPLICANT: Walsh, P. Sean
TITLE OF INVENTION: A Chemiluminescent Method for the
TITLE OF INVENTION: Quantitation of Human DNA
NUMBER OF SEQUENCES: 20
CORRESPONDENCE ADDRESS:

CORRESPONDENCE ADDRESS:
ADDRESSEE: Hoffmann-La Roche Inc.
STREET: 340 Kingsland Street
CITY: Nutley
STATE: NJ
COUNTRY: U.S.A.
ZIP: 07110-1199
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.2!
CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/07/938,084
FILING DATE: 19920828
CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
NAME: S1AS Ph.D., Stacey R.
REGISTRATION NUMBER: 32,630
REFERENCE/DOCKET NUMBER: 8669
TELEPANE: (510) 814-2863
TELEPHONE: (510) 814-2863
TELEPHONE: (510) 824-2185
